MEMORANDUM FOR : Chief, Materiel Division, OSA

SUBJECT : Proposal for Mobile Test Wagon Type I Equipment

REFERENCE : Memorandum for Sensors Systems Division from Chief, Materiel Division, dated 14 January 1964, subject: Proposal for Mobile Test Wagon Type I Equipment (OSA-0298-64)

1. Under present concept of conducting flight tests at the north pad of the area and operational missions from the south pad it is essential that a mobile, test wagon be employed for final check out of the Type I system just prior to installing it in the aircraft.

2. The attached proposal meets the requirements of this type of operation and will also serve to support the camera during deployment. Present equipment used for this purpose consists of separate items of test gear and is "mobile" only in the sense that it could be loaded into a truck and hauled to another location.

3. It is recommended that only one mobile test wagon be procured at this time.
